WORK EXPERIENCE

Vita Detection *Montreal, CA*
Machine Learning Intern Apr 2025 - Aug 2025

- Developed and implemented domain adaptation techniques for object detection in security X-ray images, applying the Align and Distill (ALDI) method to enhance model robustness.
- Designed and optimized deep learning models using PyTorch and PyTorch Lightning on Amazon Web Services (AWS) and Compute Canada for large-scale experiments.
- Analyzed and benchmarked multiple approaches for cross-domain object detection, improving model generalization under domain shifts.

The University of British Columbia *Vancouver, CA*
Machine Learning Intern Nov 2024 - Feb 2025

- Implemented the state-of-the-art models in PyTorch and PyTorch Lightning, such as OmniMotion, Real NVP, Betrayed by Attention, and Neural Radiance Fields (NeRF) on Google Cloud Platform (GCP) and Compute Canada.
- Reviewed and discussed approximately 5-7 research papers per week, analyzing various approaches to improve the performance and accuracy of previous methodologies.
- Enhanced model accuracy for detecting occluded objects by around 7 %.

Zanjan University of Medical Science *Zanjan, IR*
Data Research Analyst Jul 2022 - Jan 2023

- Conducted research on Machine Learning and Electroencephalogram signals.
- Utilized Welch, Convolution, and Fourier transform to compute connectivity, power, and amplitude.
- Applied low-data techniques, such as data augmentation and transfer learning, to prevent underfitting and improve model performance on limited datasets.
